

For the files listed below, please visit our Download section on Fatal1ty.com to download...

- * **Qzonfig.cfg** = My config.
- * **Fatal1tyMouseFix.zip** = Mousefix that removes accel from XP and maybe Vista.
- * **Fatal1tyUSB.zip** = File that allows you to edit and change your mhz rate for your USB port!
- * **Hidusbf.zip** = File you might need to upgrade some usb info to make sure the Setup.exe takes affect for the correct ports etc.

Windows XP or Vista : Mouse sensitivity 3/11

Windows XP or Vista : No Accel - Use Mousefix.reg

Windows XP or Vista : Acceleration CheckBox - UNCHECK

Note: Currently I have my refreshrate in game set to 0... You should find what highest Refresh Rate your monitor can withstand at the resolution you have selected and set "**r_displayrefresh**" to whatever that number is... The desired frequency is "**r_displayrefresh 120**" if your monitor can do that. Usually that only works on CRT's or maybe the newest LCD's! Maybe 60, 72, 85 are the only refresh rates you can reach, so set it to that. It will create a smoother picture. 120 is what you want though... After you set your **r_displayrefresh**, type **vid_restart** in console and that'll make it take affect. Check your monitor frequency channels in its menus to see if it's really reading at the refreshrate you put in.

Hope this helps you guys get some major frags in your next gaming session. I know it helps my game a ton...

Best of luck and frag on!
